Effects: New wiping stains in modish, metallic colour tones

Description/features: Effects on slate veneer:

The effect develops depending on reduction of the dried wiping stain:

This effect is achieved with a hard grinding block,

using a soft Scotch Brite

This effect is achieved by patination and rubbing with a Scotch Brite:

A “golden strand” was inserted using a pipette and an abrasive sponge was used to roughen the edges a little.

Information on use and safety:

Please observe the latest technical information and material safety data sheets for the individual products listed.

Effects: New wiping stains in modish, metallic colour tones

Special instructions:

Slate suppliers: Questions about suppliers for these genuine sheets of slate glued onto MDF can be resolved by an Internet manufacturer search. Search term "slate veneer". This will return several suppliers.

Wood substrate: The bare wood on the wood samples was heavily brushed.

General information: Precise application, drying times, addition of hardener and thinner, etc. can be found in the respective technical information for the individual products.
